

PATIENT-LEVEL MESSAGES IN THE PALM OF YOUR HAND

The Caregiver's Checklist from PRM Analytics® lets ACOs, APMs, payers, and health systems send actionable information directly to providers during the patient visit. The checklist evaluates patient-level data against strategic initiatives and delivers messages directly to the provider's mobile device.

Our integrated solution gives you the ability to meet providers where they are, and engage with them where they can have the most influence – in the exam room.

Health System sends checklist to physicians via mobile device

KEY FEATURES

- Patient-specific, actionable messages during the patient encounter
- Mobile delivery without the need for additional 'clicks'
- Standard messaging includes quality metrics, coding gaps, care team identification, high-risk medications; custom messages available
